1&2. Screenshots & Explanation:

AuthController.php — Kate

New Open Save Save As Undo Redo

AuthController.php dashboard.blade.php

```php
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;
use App\Models\User;
use Illuminate\Support\Facades\Hash;

class AuthController extends Controller
{    public function showRegister(){
        if (session()->has('user_id')) {
            return redirect()->route('dashboard');
        }
        return view('auth.register');
    }

    public function register(Request $request)
    {
        $request->validate([
            'name'                  => 'required|string|max:100',
            'email'                 => 'required|email|max:150|unique:users,email',
            'password'              => 'required|min:6|confirmed',
            'password_confirmation' => 'required',
        ], [
            'name.required'      => 'Your name is required.',
            'email.required'     => 'Email address is required.',
            'email.unique'       => 'This email is already registered. Please login.',
            'password.required'  => 'Password is required.',
            'password.min'       => 'Password must be at least 6 characters.',
            'password.confirmed' => 'Passwords do not match.',
        ]);
```

Output Diagnostics Search Project Terminal Build main 99:5 INSERT en_US Soft Tabs: 8 UTF-8 PHP (HTML)

This page of code is indicating user dashboard first user will see registration page ig not login yet.

web.php — Kate

New Open Save Save As Undo Redo

HomeController.php × AuthMiddleware.php

```php
<?php

use Illuminate\Support\Facades\Route;
use App\Http\Controllers\AuthController;
use App\Http\Controllers\DeckController;
use App\Http\Controllers\CardController;
use App\Http\Controllers\ProfileControlle
use App\Http\Controllers\HomeController;

Route::get('/', [HomeController::class,

Route::get('/register',  [AuthController
Route::post('/register', [AuthController
Route::get('/login',     [AuthController
Route::post('/login',    [AuthController
Route::post('/logout',   [AuthController

Route::middleware('auth.check')->group(fu

    Route::get('/dashboard', [HomeContro

    Route::get('/profile',          [Prof
    Route::put('/profile',          [Prof
    Route::put('/profile/password',[Prof

    Route::get('/decks',              [Dec
    Route::get('/decks/create',       [Dec
    Route::post('/decks',             [Dec
```

This is important code because project start from here, here it check user registered or not if not he can't access dashboard.

dashboard.blade.php — Kate

New Open Save Save As Undo Redo

AuthController.php | dashboard.blade.php

```
@push('styles')
<style>
    .stat-card {
        background: #fff;
        border-radius: 16px;
        border: 1px solid #e2e8f0;
        padding: 1.5rem;
        box-shadow: 0 2px 12px rgba(79,
        display: flex; align-items: cen
    }
    .stat-icon {
        width: 56px; height: 56px; borde
        display: flex; align-items: cen
        font-size: 1.6rem; flex-shrink:
    }
    .stat-num  { font-family: 'Syne', sa
    .stat-label{ font-size: .82rem; colo

    .deck-mini {
        background: #fff;
        border-radius: 14px;
        border: 1px solid #e2e8f0;
        padding: 1.25rem;
        transition: transform .2s, box-s
        text-decoration: none; color: in
        display: block;
    }
    .deck-mini:hover {
```

User will see his record in dashboard.

AuthMiddleware.php — Kate

New Open Save Save As Undo Redo

AuthController.php dashboard.blade.php

```php
<?php

namespace App\Http\Middleware;

use Closure;
use Illuminate\Http\Request;

class AuthMiddleware
{
    public function handle(Request $reque
        if (!session()->has('user_id')) {
            return redirect()->route('log
        }
        return $next($request);
    }
}
```

Here check user login info.

3.Design Decision:

1.Card Structure :Keeps content organized by topic,easy to query in database, scales well when users have many cards

2.Spaced Repetition Scheduling: App shows cards at optimal times, improves memory retention

4.Bug & How fixed:

-> I faced some bugs one of them was login issue when i give data for login it don't store it It was database management issue. Solved in migration files.
